

Consultant and Services Directory

2021 Edition

Welcome

I am very pleased to introduce the new edition of the Phoenix Hospital Group Directory of Consultants and Services. In this directory you will find information about our facilities, services and our principal Consultants and Specialists. We also include details on key contacts and how to refer patients.

Phoenix continues to expand its locations and the range of services it provides and we are delighted with our progress.

Our facilities are supported by a growing network of medical Specialists who are experts in their fields. Our patients continue to provide excellent feedback on their care.

If you have any questions about our group or if I can assist in any way, please do not hesitate to contact me on the email below.

I would like to take this opportunity to thank you for your continued support.

With very best wishes

Phoenix Health Screening

At Phoenix Hospital Group, we aim to provide comprehensive health screening choices, whilst avoiding unnecessary tests and expense. Our health screening can identify medical issues before they start to cause symptoms. If any further tests or management is needed, your care can be seamlessly referred to our Specialist Consultants.

All medical screening investigations have strengths and limitations, therefore the combination of tests we offer are a guide only. Our Doctors will discuss your individual concerns with you to adopt a personalised medicine approach and recommend the investigations most suitable for you.

Our extensive range of screening tests will provide you with a full assessment of your health and well-being. Conducted by experienced private screening GPs and supplemented with world class diagnostic equipment, our packages are designed to detect most major illnesses and conditions.

Early Detection of Cancer

We are one of the few centres to offer virtual colonoscopy. A virtual colonoscopy requires no sedation and it can be used to help diagnose health conditions such as bowel cancer, which is the third most common cancer in men and second most common cancer in women in the UK. The radiologist gains information about the other organs inside your abdomen when using virtual colonoscopy, which cannot be achieved with a conventional colonoscopy.

We also offer whole body, diffusion weighted MRI scanning which assesses for Cancer tumours up to 3mm in size across the whole body. This scan requires no harmful radiation or injected contrast dye and is completed within 1 hour.
