Service Level Agreement (SLA)

Doctors and other healthcare professionals that wish to send samples to our laboratory must first arrange a Service Level Agreement with us.

Quality Assurance

Phoenix Pathology is committed to providing doctors with pathology of the highest quality. The quality of results is of fundamental importance and the laboratory operates to stringent technical and administrative standards.

Internal quality assurance is achieved by strict adherence to standard operating procedures for all analytical processes. Phoenix Pathology participates in recognised National External Quality Assessment Schemes. These schemes are subscribed to by NHS and private laboratories. Results are subjected to strict internal and external quality control.

Our quality policy can be found in our website.

Protection of Personally Identifiable Information

The General Data Protection Regulation (GDPR) came into force in May 2018 and has had a significant impact upon the way that personal data is managed; placing legal requirements upon data processors and controllers to manage that information securely, maintain records of the processing that is carried out, and report when breaches of the regulation do occur. This has impacted the way many businesses operate and is not restricted to the healthcare sector. The GDPR requirements have been implemented within the context of a mature ISO 27001 Information Security Management System – the globally accepted standard by which information is secured. This ensures that senior management have regular visibility of the threats to the confidentiality, availability and integrity of the information that we process, and are able to steer the efforts of their teams to provide an efficient service that places the confidentiality of our customers and their patients at the heart of everything we do.

In order to support our customers compliance with the regulation and as a part of a wider GDPR compliance project Phoenix Pathology has updated its standard terms and conditions to include revised data processing clauses, which are mandatory when providing personal data to another organisation.

Complaints Policy

Where a doctor or patient needs to raise a complain, they should email Michel Pelisser (Head of Pathology Services) michel.pelisser@phoenixhospitalgroup.com giving details of the complaint. The information forwarded will be treated as confidential and investigated fully.

Patient Request Form

The request form that clinicians must complete are available in our website.

To comply with good clinical practice, it is important specimens and form are correctly and fully labelled, to include three unique patient identifiers: First name, Surname, Date of birth, Hospital or Clinic number, Medical Record Number (MRN) are examples of patient identifiers.

The form must also contain the identification of the requester including full address and email to receive the results.

Other requirements to be fulfilled when ordering tests:

- Time and Date of collection of samples
- Type of sample and Anatomical site, where appropriate (e.g. swabs)
- Relevant clinical information
- Relevant details of medication
- High Risk Samples should be clearly identified on the form and individually packed separately from other samples
- Hazard Group 4 pathogens (such as Ebola or Viral Haemorrhagic Fever) must **not** be sent to the laboratory.

Sample collection guide

All samples must be collected following our sample collection guide which is available in our website.

Appointments for swab and blood collection

To arrange an appointment with our nurses for swab and / or blood collection please email please email the request form to appointments@phoenixhospitalgroup.com containing the patient's telephone number and email.

Sample add-ons

Most samples received in the laboratory are kept for one week. If sample type, stability and volume allow further testing can be requested by emailing info@phoenixpathology.co.uk.

Referral Laboratories

When a test is not offered in-house, we will send the sample for analysis at accredited referral laboratories. The identification of the referral laboratory is clearly stated in the pathology report.

Sample acceptance protocol

Our expectations:

Service users are responsible for ensuring that samples are unequivocally traceable by the request and labelling, to an identified patient and facility.

Services users must also ensure that all of the below points are followed:

- i. The patient must be correctly identified at the time of the sample taking.
- ii. When phlebotomy is required for sample collection, the correct phlebotomy order of draw must be followed.
- iii. Full information must be provided on request forms. This includes 3 patient identifiers (surname, name, date of birth and patient ID) and also clinical details and any other information that will ensure that the correct tests and follow up tests are performed as required.
- iv. Where electronic requesting is used, the service user must ensure that the exact process of ordering of paper request forms takes place before any samples are sent off for testing.
- v. Samples must be taken following sample requirements and instructions.
- vi. Blood transfusion sample labels must be handwritten, and the request form and samples must contain signature of the person collecting the sample.
- vii. Samples must be taken into the correct containers and be filled to the correct levels. The laboratory must be contacted if this cannot be done and they will advise as to whether alternatives would be acceptable.
- viii. Specimens must be correctly packaged, preserved and transported in a timely manner to the laboratory for testing. The laboratory must be contacted if this cannot be done and they will advise as to whether alternatives would be acceptable.

- ix. The sample container must be sealed in order to prevent spillage. Failure to do so may result in loss of sample.
- x. The sample must arrive in the laboratory with acceptable quality for testing.

Expectation from our service users:

Provided all the expectations above are fully met, the service users can in return expect the following levels of service from the laboratories.

- i. Requests and tests will be received, registered and processed by trained and competent laboratory staff.
- ii. Examination testing will be performed by trained and competent laboratory staff.
- iii. Validation of examination testing will be performed by qualified and competent scientists.
- iv. Authorisation of examination results will be performed by registered, qualified and competent scientists.
- v. Where appropriate, clinical advice and interpretation will be given verbally and/or in writing by qualified and competent clinical or medical practitioners.
- vi. Where appropriate, medical advice and interpretation will be given verbally and/or in writing by qualified Medical Practitioners.
- vii. Laboratory will ensure high quality of examination testing that will be subjected to continued external proficiency testing and regulatory assessment.
- viii. The laboratory will try its best to make results available to service users within agreed turnaround times stated on the Phoenix Pathology Guidebook. Service users will be notified, where appropriate of any circumstances that adversely affect this.
- ix. The laboratory will inform service users as quickly as possible of circumstances that could impact on the reliability of examination results.

- x. The laboratory will inform services users of any changes to sample requirements or testing processes that impact on examination results and/or reference ranges.
- xi. Laboratory Management will maintain processes that ensure and test on going competence of all grades of staff employed.
- xii. When samples are rejected the laboratory shall issue a report that details the reason(s). Where the request is deemed to be urgent the communication may also be by telephone.

Sample rejection criteria

Sometimes tests cannot be performed in the laboratory if samples fall short of the quality, volume or other eligibility criteria. In these cases, the laboratory may need to reject the samples, and not carry out processing. Sometimes the laboratory is able to rectify a situation – and although turnaround times may be affected, it avoids having to arrange for samples to be taken again.

Summary List for Sample Rejection

- Incorrect sample types received:
- Samples without the appropriate preservative (e.g. acidified urine samples).
- Samples that are received ambient, when a frozen sample is required.
- Samples that are received unprotected from light, when they are required to be covered at the point of venepuncture.
- Samples in incorrect containers (e.g. cervical cytology must be a ThinPrep vial; urine cytology must be in a uricyte container).
- Insufficient sample received.

- No sample received.
- Labelling or form issues (mislabelled / unlabelled / no forms/ no clinical information).
- Clotted / haemolysed /lipemic /icteric samples.
- Sample is broken or has leaked in transit.
- Stability time has been exceeded. Stability time is test dependant, and also refers to tests that can only be carried out on certain days of the week sample contamination (e.g. being in the same bag as a leaking sample).
- Samples are high risk or infectious.
- Samples that are received in expired tubes.

Department Specific

- Sample Reception will not accept samples packaged with needles of any kind.
- Haematology cannot accept frozen whole blood for testing.
- Blood Transfusion will not accept samples with a label. All samples must be hand-written with patient details, date and time of collection and signature of the sample collector.
- Coagulation cannot accept over or under filled samples for testing.
- Coagulation cannot accept previously frozen samples that have thawed in transit.
- Biochemistry cannot accept previously frozen samples that have thawed in transit.
- Biochemistry cannot accept samples that display antibody interference.
- Biochemistry cannot accept samples that have had separation delays/un-centrifuged samples that have been stored in the fridge.
- Biochemistry cannot accept paraprotein resulting in viscous samples.
- Biochemistry cannot accept CSF protein that is blood stained.

- Immunology cannot accept TBQ kits that:
 - i. Do not contain all of the appropriate tubes.
 - ii. Are incubated for more than the specified 16 hours.
 - iii. Have passed the incubation time period.
 - iv. Are over or under filled.
- Microbiology cannot accept samples in non-sterile containers or in formalin.
- We cannot accept samples without three points of identification for DRP testing.
- Referrals cannot accept samples that are not labelled by hand for blood group testing.
- Molecular Pathology cannot accept samples for Haemophilia testing without informed consent.
- Cervical Cytology cannot accept over or under filled samples for testing.
- Cervical Cytology cannot accept samples received within three months of the previous test in order to allow epithelial cells to regenerate.
- Urine cytology cannot accept delayed samples unless they have been refrigerated.
- Samples deemed to be PRECIOUS (e.g. CSF, fluid, tissue, bone marrow and paediatric samples) will not be discarded by the laboratory. Results will include a comment relating to the condition of the sample (e.g. sample unlabelled).

Genetic consent forms

Genetic tests require a consent form. Please email info@phoenixpathology.co.uk to request

Sample Packing and Transport

Phoenix Pathology medical couriers to collect samples from clinics. Samples may need to be transported for subsequent processing and testing. Transport systems will be various and cover both long or short distances. Samples need to be collected and packed into appropriate sample containers provided by the laboratory in order to maintain integrity of the sample(s). Attention needs to be given to temperature, special transport containers and time limitations.

Clinics, practices and laboratories who are posting or transporting samples by air, sea, rail and road between local, regional and reference laboratories, or between laboratories in other countries, must adhere to a number of regulations. These regulations are designed to deal with transportation accidents and spills, reduce biohazards and keep samples intact for testing. Regulations are given by several sources including:

- National transport regulations
- IATA
- Rail and road traffic agencies
- Postal services

Compliance is mandatory in order to reduce risk to couriers, carrier, laboratory staff and passengers. Sample transport requirements are based on the category of samples being transported. Infectious substances are classified as Category A or Category B.

Phoenix Pathology does not arrange for transport of Category A samples (infectious substances capable of causing permanent disability or life threatening or fatal disease to humans or animals). Instruction and packaging for Category B is provided, covering Biological Substances, UN number UN 3373.

Packaging Requirements

There are specific packaging instructions and labelling requirements requiring triple packaging.

- Primary leak-proof container – tube or vial containing the sample
- Secondary watertight container, with absorbent material, intended to protect the primary container
- Outer container protects the secondary container

Postal Pathology

Postal services should be considered by doctors in the UK. Note that only a limited selection of tests is available via postal pathology and turnaround times are quoted from the time of receipt in the laboratory. Please email the laboratory for more details.

Pathology Consumables

Our laboratory may be able to provide clinicians with sample collection consumables, provided the customer has a service level agreement with us.

Fees for Pathology

Fees can be paid directly by patients or by the practice, clinic or requesting organisation. A payment instruction clearly identifying to whom invoices need to be sent must be given with each patient's request. Patients are normally invoiced within 7 days to the address provided by the patient or practice. Their pathology fees include a standard credit/administration charge.

Receipts for insurance purposes are sent, if requested. Patients visiting 25 Harley Street for sample taking can settle their pathology fees at the time of their visit. A credit/administration fee is raised for invoices sent to patients

Test Reference Ranges

Test reference ranges and automated interpretative comments for in-house tests were reviewed by clinical leads in 2022 and are clinically appropriate for our patient cohort. Test reference ranges are reviewed yearly by clinical leads and where they need to be updated (e.g. reagent formulation or method change) this is stated in the report with the date such update is effective from. The same protocol is followed by our referral laboratories.

To request our current test reference ranges please email us.

Measurement of Uncertainty

All types of measurement have some inaccuracy due to bias and imprecision; therefore, measurement results can only be estimates of the values of the quantities being measured.

Evaluating measurement uncertainty is an ISO 15189:2012 accreditation requirement.

Measurement of Uncertainty for assays is available upon request.

Overall assay performance is also regularly monitored through internal quality control (IQC) and external quality assessment (EQA) schemes and incorporated in test result interpretation.

Sample instructions

1	Contact the laboratory for special sample tubes/containers/instructions.
2	Confirmation of not negative drug screens by GCMS may take up to 5 days.
3	Clinical history essential and protect from light.
4	Send to the laboratory without delay.
5	Do not send sample to the laboratory between Friday noon and Monday morning.
6	Contact the Referrals Department before taking and sending sample to the laboratory.
7	Sample should be separated and frozen if sending overnight.
8	DRP Form required. Please contact laboratory to receive DRP Form.
9	Clinical history must be provided.
10	Contact the laboratory for special stability tubes for lymphocyte subsets – or take an EDTA sample and ensure same day delivery to the laboratory, Monday to Friday noon (do not send sample between Friday
11	Patient consent required. Consent Form can be found at the back of this guide.
12	Please provide one sample for each person being tested.
13	Protect from light.
14	Provide details of travel history.
15	Ammonia. Sample: EDTA plasma only. Full tubes and tightly stoppered. On ice, centrifuged and analysed
16	Lactate. Sample: Fluoride oxalate plasma only. On ice and separate from cells 15-30 mins, analyse promptly. Handle with care as sweat contains large amounts of lactate. No tourniquet. Patient: Rest 30 mins prior to test.
17	Homocysteine. Should be spun and separated with 1 hour of venepuncture.
18	Citrate Samples. Samples should be double spun and separated and frozen within 4-8 hours of sample taking, if a delay is expected with transportation to the laboratory, samples must be transported as frozen.
19	Must include patient's age, height and weight.
20	Sample types: FCRU or PCR swab or TPV or Semen.
21	Urine cytology container, ideally first catch, mid-morning specimen.
22	Must be fresh.
30	Collect sample at end of exposure.
33	Sample must be labelled by hand with first name, family name, gender and date of birth detailed on sample
34	Samples must arrive in the laboratory on the same day of sample taking or contact the laboratory.
35	Patient should be fasting and resting for 30 mins before sample taking. Samples need handling urgently.
36	Renin: Sample collected either upright /active or resting /supine (3 hrs lying).
37	Provide sample time and date of collection.
38	EDTA sample should not be separated: send whole blood.
